Very little corrosion, tuberculation or pitting of the pipe or blistering of its coating was found, the carrying capacity being remarkably well maintained, probably within 10 per cent, of its original amount in most of the pipe, and within 20 per cent, in the oldest and worst case found, as indicated by certain friction loss tests. The exterior coating, while on the whole not in quite such good condition as the interior, was found still generally sound except in those few cases of very limited length in which the pipe traverses soils highly organic or acid in content, such as certain black adobe soils and salt water marshes. The record is a very creditable...
