Many such systems can be found in nature and others are man made. These systems can be biological, electrical, mechanical, chemical, or ecological, to name just a few categories. Our human body is full of systems whose continued automatic operation is vital for our existence. On a daily basis we come in contact with man made systems whose automatic operation ensures increased productivity, promotes economic development and improves the quality of life. A primary component that is responsible for the automatic operation of a system is a device or mechanism called the controller. In man made systems one must first design and then implement such a controller either as a piece of hardware or as software code in a computer. The safe and efficient automatic operation of such systems is testimony to the success of control theorists and practitioners over the years. This book presents new methods or controller design. The process of developing a controller or control strategy can be dramatically improved if one can generate an appropriate dynamic model for the system under consideration. Robust control design deals with the question of how to develop such controllers for system models with uncertainty. In many cases dynamic models can be expressed in terms of linear, time invariant differential equations or transfer functions. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Hardcover.
